

### Abstract

The invention relates to a pressure-sensitive adhesive. It is envisaged that the pressure-sensitive adhesive comprises a first layer and a second layer,

the first layer being a heat-activatable pressure-sensitive adhesive which has a static glass transition temperature  $T_{g,a}$  or a melting point  $T_{m,a}$  of at least  $+30^{\circ}\text{C}$ ; and

the second layer being a polyacrylate pressure-sensitive adhesive which has a static glass transition temperature of not more than  $+15^{\circ}\text{C}$ .
